Application/Control Number: 10/650,527

Art Unit: 3651

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In line 5 of claim 1 there is lack of antecedent basis for "the height setting". Also it seems that if the transfer device were pivoting about a vertical axis there would be no change in the height of the end of the transfer device.

In line one of claim 2 "The" should be changed to -A-. Also in line 7 of claim 2 there is lack of antecedent basis for "the discharge chute" as only a discharge chute controller has been set forth.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-11 are rejected under 35 U.S.C. 102(b) as being anticipated by Pollklas (U.S. Patent 5,575,316).

Pollklas shows a control device 10 for controlling a transfer device 3 on a harvesting machine 1. There is a pivot range limiting means 6, which sets a pivot range, and once this range is reached the transfer device is pivoted and relocated.

Re claim 2, the control device 10 includes a memory (see column 4, line 50) and the controller communicates with an adjusting device 9 for adjusting the transfer device.

Application/Control Number: 10/650,527

Art Unit: 3651

Re claim 3, the control device must inherently include user-input.

Re claim 4, a user can cause the chute of the transfer device to elevate.

Re claim 5, a level h is set and the chute automatically adjusts itself relative to this level.

Re claim 6, disclosed is a sensor 6.

Re claim 7, current position data is maintained in the memory.

Re claim 8, the memory can be accessed as a "look-up table".

Re claim 9, the level of the chute is stepped up or down as required.

Re claim 10, disclosed is the control of a discharge flap 5.

Re claim 11, the flap is fully controllable to different positions based on the location of the chute.

Claims 12-14 are allowed.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to James R Bidwell whose telephone number is (703)308-1144. The examiner can normally be reached on Tues.-Thur. from 6:30 to 4:00. The examiner can also be reached on alternate Mondays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Chris P Ellis, can be reached on 308-1113. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Art Unit: 3651

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
